

MANNOL Injector Cleaner 9981

Injector Cleaner – an additive in all types of gasoline - a universal high-performance cleaner for fuel systems of gasoline engines. It is suitable for all types of gasoline engines (atmospheric and turbocharged), especially for engines equipped with catalytic converters.

Properties:

- Quickly and effectively cleans fuel system parts, removing carbon, scale, tar and other deposits from injectors and valves;
- All other things being equal, increases engine power or restores it in the event of a decrease;
- Eliminates uneven fuel supply, restores smooth operation of the engine at idle;
- Eliminates jerks, starting difficulties and poor engine acceleration caused by uneven fuel injection;
- Can be used to prevent contamination and deposits on injectors and intake valves.
- Reduces fuel consumption by increasing the completeness of its combustion;
- Compatible with all exhaust gas cleaning systems;
- Reduces the toxicity of exhaust gases.

Application: Add to the tank before refueling in the ratio of 300 ml per 30 liters of gasoline. Fill in the fuel. Self-mixing. In case of heavy contamination, power loss is possible. In this case, change the fuel filter and repeat cleaning. Recommended for regular use.
