

## MN9980 Diesel Jet Cleaner 9980

Diesel Jet Cleaner – additive in diesel fuel of any kind - a powerful fast-acting nozzle cleaner for all types of diesel engines (turbocharged and atmospheric, with and without exhaust gas neutralization systems). It is especially recommended for engines with problems at start-up and unstable operation. Properties: - Quickly and effectively cleans contaminated parts of the fuel injection system: removing tar, soot, scale and other deposits from the intake valves, injectors and their sprayers. Eliminates the hang of the needles; - Lubricates the fuel system components, protecting the plunger pairs of the high-pressure fuel pump and the movable elements of the injectors, as well as the parts of the cylinder-piston group, thereby increasing the service life of the engine; - Protects the fuel system from corrosion; - All other things being equal, increases engine power or restores it in the event of a decrease; - Eliminates uneven fuel supply, restores smooth operation of the engine at idle; - Eliminates jerks, starting difficulties and poor engine acceleration caused by uneven fuel spray; - Can be used to prevent contamination and deposits on injectors and intake valves; - Reduces fuel consumption by increasing the completeness of its combustion; - Compatible with all exhaust gas cleaning systems; - Reduces the toxicity of exhaust gases. Application: Add to the tank before refueling in the ratio of 300 ml per 30 liters of fuel. Fill in the fuel. Self-mixing. In case of heavy contamination, power loss is possible. In this case, change the fuel filter and repeat cleaning. Recommended for regular use.
